"Let's save energy together"

**Cool-Breeze**

**Air Conditioning Corp.®**

*"Relief from the Heat"™*

Did you know that Weather is the #1 cause of high electric bills according to FPL? Well its true and cooling your home can account for half or more of your electric bill, especially in South Florida's **HOT** and **HUMID** weather! Below are some suggestions you can take to reduce your electric bills and save energy at the same time!

## Energy Saving Tips

1. Regular Maintenance may be the most significant part of saving energy! Your air conditioner requires regular maintenance in order for the unit to function effectively and efficiently! Neglecting maintenance to a system can cause a steady decline in the systems performance causing energy use to increase.
2. Thermostat settings are key as well; for every degree you set your thermostat above 72 you will save up to 5% on your cooling cost. We recommend you to set your thermostat between 74 to 78 Degrees.
3. Install a programmable thermostat to automatically switch between two different temperature settings during the day, ensure the cooling and heating system keeps you cool when you are home and saves you energy when you are away.
4. Clean or replace your air conditioning filters at least once a month. This will help your system run more efficiently cutting your cooling costs!
5. Shade windows that face East and West. Keeping windows shaded helps eliminate unwanted heat from entering your home. Unwanted heat causes the system to use more energy during the cooling process.
7. Your systems evaporator coil should be professionally cleaned at least once per year to guarantee system is working at peak performance.
6. If you are considering replacing your old system consider installing a high efficiency air conditioning system that is properly sized for your home. The more efficient the system the higher your savings will be!

Cool-Breeze offers **Maintenance Savings Agreements (MSA)** we inspect, clean and keep your system at peak performance for you! In other words, you can sit back and relax knowing we have performed all the necessary steps to ensure your system is running at its optimum efficiency helping you save energy while lowering your electric bills!
